**A 10. ADVANCE INFORMATION ON CHANGES TO SWEDISH CONTROLLED AIRSPACE**

The Swedish Transport Agency has decided on raising of the upper limit of Swedish controlled airspace from present FL460 to FL660. The change implies a harmonized upper airspace limit common with the neighbouring states.

This means that the ICAO airspace class C will apply within Sweden FIR/UIR between FL095 and FL660.

In the distinction between lower and upper ATS routes, the prefix U of the route designator will be removed in order to facilitate flightplanning.

The division flight level of FL285 between upper and lower airspace will be retained.

The implementation date is **18 NOV 2010**.
